## CANON INKS

There's no point using a high-quality printer with low quality inks. Which is why our Canon printers use the right inks and ink systems to ensure you get the highest quality prints, every time.

### PIXMA HYBRID INK SYSTEM

Canon PIXMA printers have a clever Hybrid Ink System, that uses two kinds of ink. Dye Ink produces vivid natural colours for photos and graphics, while Pigment Ink gives you sharp, easy to read black text for documents.

- Dye Ink (CLI/CL) produces vivid natural colours for photos
- Pigment Ink (PG/ PGI) gives you sharp, easy to read text.

### MAXIFY DUAL RESISTANT HIGH-DENSITY INK

A special Ink that's good for business – dual resistant High-Density Ink is a newly-developed pigment formula, used in all Canon MAXIFY printers. It's good for business for many good reasons:

- Resistant to rubbing
- Won't get smudged by highlighter pens
- Splash proof

Plus, it prints vivid colours and sharp text, for great looking documents.

### PIXMA ENDURANCE INK REFILLS

Designed for serious print productivity, the ink bottles made for our Canon ENDURANCE printers remove all fuss and mess, with a special ink bottle nozzle, that reduces spillage.

These ink bottles can print up to 6,000 pages in black, or 7,000 pages in colour, with one set of ink. Delivering quality at a low cost per page.

### EXTRA LARGE INKS

Harness efficiency by using Canon XL and XXL Inks. Remember, a genuine Canon XL and XXL ink cartridge, means high capacity so you can have more ink for more printing.

## PRIME LENSES

Prime lenses have only one focal length. That means if you want to get closer to a subject, you've got to use your feet. While this may make primes less convenient than zoom lenses, primes are usually smaller, lighter, and faster. Prime lenses come in big when you need to shoot in low light.
